[<] ► Natural Remedies & Health Anonymous 07/21/19 (Sun) 11:17:10 371848 [No.5460](#)[[Last 50 Posts](#)][[Watch Thread](#)][[Show All Posts](#)]

Here you will find a collection of information about natural cures and remedies

A repository of information and methods about healing without using big pharma's products.

For too long the medical pharmacology industrial complex has made more money from customers than cures. Many effective natural medicines have been suppressed or banned and forgotten by the general public.

You'll find some information, some research links, some opinion.

Which old natural medicines have research to back up the claims of cures?

California Anons; The LA Black Plague [Bubonic Plague]; What to know, How to Prepare

Part 1/5 Silver and the Plague, things anons should know.

Using Large silver Colloid against Plague in your lungs, sinuses.

Part 2/5 Using small Nano Silver against Plague in your home.

Part 3/5 Recent Science on Silver, Good news even on the plague.

Patents coming.

Stuff for Docs getting ready if you are lurking.

Bioweapons level 3 grade plague and silver research is here.

Part 4/5 Essential Oils From the Black Plague to Modern Science: What anons need to know.

The story of the 4 thieves.

Recipe for the Black Plague "Oil of Thieves" included.

Part 5/5 Plague defense for the Yard, home, and pets.

Asked myself this morning, what would I be doing if I was living in LA right now, with this plague warning? Did a dig for the sake of my CA anons. This thing could show up anywhere. It already tried to break out once I read while digging this. Dr.s were lucky, stopped it. I think it was Denver. Anyway, here is the dig for the archives and hope we never need it. Some heavier sauce for docs too.

Silver and Yersinia pestis (Black Plague, Bubonic Plague)

Yersinia getting resistant to antibiotics, evolving, so Docs are turning back to silver in the research, used pre WWII

First, colloidal or nano silver knocks out plenty of organisms, and can be safely sprayed on counters, taken internally. Use the directions on the label. I have description below on the two major different sizes of particles and their best uses from my research and personal experience.

The microbe is called Yersinia. There are two ways this thing spreads.

1) Insect bites/fleas/from the rat infestation. (Keep fleas away)

2) Second most common way is inhalation. (protect sinuses, lungs, air in the home)

Use silver spray arisol in the lungs, preferably larger COLLOID particles that will stay put and not get taken in by lung cells. (Pic 1 related) is colloidal silver and is what I mean by the larger particle 100+ nanometers) To make it cheap get a regular sprayer, a nasal sprayer, at 10 ppm each. Then pick up a bottle of 500 ppm. (Pic 2 related)

For every OUNCE, if the bottle is new and already has 10ppm, add 7 drops 500 ppm to approximate 30ppm strength.

For every OUNCE, if sprayer empty, use 11 drops of the 500 ppm and fill with DISTILLED (only distilled) water.

Careful with injecting the COLLOID but it's a bigger particle so it is better for inhaling, coating lungs, sinus, as it is too big to get into cells. It stays put in the lungs where the killing needs done, if microbes are inhaled. If too much gets ingested by mouth, the larger particles taken in too large amounts will be sent to skin as toxin, which is what turns people blue. No more than a teaspoon a day, 30ppm.

Spray sinuses, inhale to lungs 5x a day x 5 days. Good for 6 weeks. Repeat.

End 1/5

NOW... the little nano silver. How to use that to protect against the plague:

For nano silver (tiny silver particles, 100 nm down to .008nm) I have used this generator in research on myself, killing arthritis (mycoplasma) for two years now. Doing great, and no signs of smurfing out yet. The arthritis is gone. Only bone damage remains.

Cost: About 200 bucks complete with the silver rods. Cost can be split with friends and family. Makes gallons, a quart at a time, every three hours for counter spray, putting in pet water etc.

It makes NANO silver (.008-100nm) , not colloidal (100nm+), so much less silver ingested in much smaller particles. Prolly why I am not blu yet, drinking 2-4 oz a day. There are other generators, but can not vouch for their quality personally, I only have experience with this one. It is the one I use. Has worked well 2 years, and I have made gallons.

BTW, These guys have an encyclopedia of all of the old silver research from before WWII. It's great medical history.

<https://thesilveredge.com/sitearticles/colloidal-silver-and-the-bubonic-plague.shtml>

The machine makes volumes of the small stuff cheap, but it itself is not so cheap. Worth it tho.

The new science on silver. They are hiding a lot of it. You can find abstracts but, they are holding publications close in hot pursuit of patents with silver carriers. The stuff works.

The FDA

Silver is being recognized in science, as the bad bugs get resistant to antibiotics. Some preparations now being FDA approved. Example I found:

Example:

Silver Sol Fights Superbug Infections - now FDA approved. Follow the instructions.

<https://www.realnatural.org/silver-sol-beats-antibiotic-resistant-bacteria/>

Keeping the plague out of your yard and your house.

Survival of Yersinia pestis on Environmental Surfaces

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC154802/>

According to this research, Survival of Yersinia pestis on Environmental Surfaces is about 5 days.

Use nano silver self generated spray on counters, floors if the time comes. Site above is the least expensive way to make big volumes of this kind of thing cheap. If too expensive, get together with neighbors, family, chip in. The thing can make gallons to share/have ready.

Spray it on carpets too. Water will dry leaving the silver kicking around as dust in the rugs.

End 2/5

Due to their high virulence by the respiratory route, these pathogens are considered potential bioterrorism agents, excluding MRSA, and are classified as such in list B by the Centers for Disease Control and Prevention.[10,11]"

"A series of N-heterocyclic carbene silver complexes have been synthesized and tested against the select group of bio-safety level 3 bacteria Burkholderia pseudomallei, Burkholderia mallei, Bacillus anthracis, methicillin-resistant Staphylococcus aureus and Yersinia pestis. Minimal inhibitory concentrations, minimal bactericidal and killing assays demonstrated the exceptional efficacy of the complexes against these potentially weaponizable pathogens".

Translation.

It took very little (minimal) to kill these things!

Conclusion on Nano and Colloidal Silver folks. Use safely. Have counter sprays ready:

Get a silver generator guys. If the plague hits in any city, it will save many lives.

Some high tech history primer for docs out there:

The Ancient Oil of Thieves, from Babylon through the Black Plague: (fun story and the recipe!)

Before I get started here, caveat to pet owners. The silver is safe for pets. BUT!!!!!!

Pay close attention to what you do with essential oils around pets who can get damaged organs, seize and even die from some of them. See the pet link at the bottom for ways to get rid of fleas in your yard, and keep them off the pets naturally, should the need arise with a real plague in LA or elsewhere.

THEIVES OIL Story

TL;DR

It's Black Plague Europe. People dying everywhere.

The story goes that 4 thieves were getting wealthy raiding dead people's homes for years, without getting sick. They get dragged before the Royalty for their theft. Royalty realizes they were constantly in and out of plague homes without getting sick and had no fear of the plague. They were offered leniency if they fessed up with the secret of not getting the plague. Their secret? Now called "Oil of Thieves" after the legend.

Many different versions of this story on line, so, no real single truthful sauce that reads the same as "history", other than there were 4 thieves that, when dragged before the the King or Queen, gave up their secret. They apparently soaked a rag with their essential oil mix, threw it through the window of the home of the dead person, waited for the oil to diffuse into the air (like aroma therapy) and then went into the house to get the goods. Kept their faces covered with rags soaked in the "oil of thieves".

First reason it could be true, is that paintings of doctors helping plague victims have those bird beak looking masks, and writings of the smell on their robes an masks. Docs MAY have started using essential oils on the masks to prevent catching the plague. Second reason it might be true is in the biomed links below from modern research on these many oils. (Pic 1 related is one of the masks)

Is there a recipe? Yes anons, archive this stuff:

Oil of Thieves

40 drops clove bud essential oil

35 drops lemon essential oil

20 drops cinnamon essential oil

15 drops eucalyptus essential oil

10 drops rosemary essential oil

The oils can be mixed in a dark-coloured 10ml glass bottle and then used in a diffuser, or diluted with carrier oil 1:4 human topical, minimum 1:10 pets, and only if necessary on the pets.

Used topically on the skin. Again, remove animals, as a number of these oils are dangerous an irritating to animals. Give animals a safe space when treating the home with diffusion.

End 4/5

Very easy to make.

Get the piece of 0.999% pure silver wire from your local jeweler. DO NOT use sterling silver. Sterling is a silver alloy, usually mixed with copper and sometimes zinc, platinum and others.

Use distilled water

Let it sit under current for about 15-20 minutes.

You can also add ONE drop of mild saline to the water if you have access to medical grade IV saline or a pure saline eye wash solution. This will increase the conductivity of the water and increase the speed and silver volume in the water. Distilled water is a poorer conductor than impure and salt water.

While we are discussing things such as this, I'd like to broach the topic of Sassafras/Safrole. Does any other Anon have experience with this? I have my own tree, but bought some amazing roots this spring off Ebay, from Eastern TN. Literally dripping with nom nom flavor and medicine. Boil into tea, maybe add clove, nutmeg, lemon slice, brown sugar/molasses. Side effects may include night sweats.

Safrole ie, Old fashioned root beer, is panacea for autoimmune inflammation. Crohn's, RA, Interstitial Cystitis, CFS, etc.

Safrole was banned by the FDA in the ____ 30yrs ago. FDA Claimed X dose causes cancer in rats...must ban...use this prescription instead, (see: Remicade...made from mice, called Mouse Juice in the treatment center)

<http://eattheplanet.org/what-is-the-story-behind-the-banning-of-safrole/>

Safrole which is a unique substance in Sassafras can not be found in significant quantity in any food products sold in the united states today. On the surface it looks like a clear and simple reason.

Official Reason behind the banning of Safrole

In the 1950s in a government study, Safrole had been force fed to rats over a long period of time and had been shown to cause cancer in those rats.

What is the controversy?

The controversy lies in the fact that further research from a third party(Lawrence Berkeley National Laboratory) discovered that Safrole is no more likely to cause cancer in humans than indoor air, or tap water. The rats in the original study were fed impractically high amounts of safrole, even if you drank Sassafras tea every day for your life you would not be anywhere close to the amount of safrole that those rats were subject to. But the

primary reason why the conclusion was in error is because when safrole breaks down during the rats digestive process it produces a possible carcinogen called 1-hydroxysafrole, This chemical is not produced when humans digest safrole nor are there any other potential carcinogens produced. On the contrary, some similar chemicals to safrole have even been proven to help humans protect against cancer, and safrole may do the same when consumed in proper quantities.

What is the real reason that safrole was banned?

What is the real reason that the government banned this medicinal plant? One theory is that the government wants us to forget that we have access to this free powerful medicine and food flavoring, so that they can tax us on imported flavorings. One support for this theory is that other plants that contain safrole are not banned but are imported and taxed such as Cinnamon, Nutmeg, and Black Pepper. Another more popular theory lies behind the little known fact that Sassafras can be used in the production of the drug MDMA more commonly known as ecstasy. So it is possible that the government created an experiment to claim that Sassafras causes cancer, pushing Sassafras and Safrole out of our everyday lives, all to help them gain more control over MDMA production. Although MDMA did not become popular till the 1980s it has been known to science since the early 1900s. It has had many uses during that time including being used as an interrogation drug, and as a drug to assist in psychoanalysis. So we may never know why safrole was made illegal, but there are a lot of questions behind that facts and reasons that the government has given us.

Over the 4th I was helping a friend. I was reciting some information and realized something.

We've all seen some synchronicity with '17' and Q. Well, here's a product of confirmation bias...

Q has indicated many cures for modern health problems were already out there.

Here is one;

The secret of mother's milk. DSM 17938 is a lactobacillus (milk loving) bacteria originally found

in a Peruvian mother's breast milk. It has incredible properties to heal the digestive tract from

one end to the other, it also has the ability to reset the immune system to factory default! (1)

It can stop autoimmune malfunction.

The genetically modified mice used in the experiment had a life span of 30 days. They normally succumb to autoimmune malfunctions of the skin, digestive tract & lungs. They are used in research on autoimmune problems. Three out of four of the mice treated for 14 days lived to the end of the experiment at 125 days.

(1)

for lighter reading version

>pic related

http://www.huffingtonpost.com/entry/gut-bacteria-autoimmune-disease_us_58595dd5e4b03904470acd99

In order to be effective you need to take above a minimum dose, no surprise there. The package does not contain a dose large enough to be effective for this type of treatment.

Now for the good part.

So, you buy some add a few drops to a fresh gallon of milk and re-cap the milk. set it out at room temp or slightly warmer for 24 ~ 36 hours for the bacteria to reproduce. At this point (before it starts to curdle from the bacteria running out of food and dieing off) it still tastes OK so, you put it in the reffridgator to halt reproduction before the die off and it curdles and gets bitter. Then you drink a glass twice a day. Its that simple.

A cure that is self replicating. I think all can see why the health industry doesn't promote this information.

[>>5472](#)

Pasteurized vs. Homogenized Milk: What's The Difference?

Excellent article that talks of the difference of the above and there is also a link within this link on the Pros and Cons of Raw Milk.

https://www.huffpost.com/entry/pasteurized-homogenized-milk_n_5606168

I was fortunate enough to be living out in the country when my first son was born. He had been jaundice at birth and needed the blood transfusions to my type. He then was allergic to any baby formulas from the store.

My mother purchased a goat (for the milk), which helped trendously. I then contacted the working ranch down the lane, who had a couple of milk cows. I told her of my issue and asked if I could purchase some of her cow's milk. She said no, she couldn't do that per the Law, but if I wanted to

help her around the ranch she would give me all I needed!

Saved my son and he grew stronger every day. We had Cream and made our own butter.

I prayed to the Lord everyday for having that Guardian Angel within my reach.

>I'm using it to stop the destruction of my thryroid (Hashimoto's) with some success

What have you read on mycoplasma. I had such severe arthritis I was bedridden for 6 months two years ago. Learned it was mycoplasma attack on injured bone tissue. Started research. Started nano silver, 4 oz a day from home generated .008-100 nanometers using the silver edge machine.

First 6 months, every couple weeks, bone in the infected area would swell, and go down in three days.

After 6 months, this swelling episode was six weeks apart. In nine months all pain was gone, skin infections disappeared.

Met woman with anti-phospholipid antibody disorder, third worst case in the nation, being treated at the cleveland clinic, wheelchair bound, on oxygen, port for constant transfusions.

It is autoimmune. I thought, maybe if the attack caused by mycoplasma, the nano silver would help her.

She took the research to the clinic. Doc said try anything.

Been 100 is days of a teaspoon of nano a day. She is out of wheel chair, off oxygen, swimming in a pool, and they are tucking the blood port under her skin in case she needs it.

So look up mycoplasma/autoimmune. Silver if it is nanoparticulate can get in the cells and apparently kill it.

Because nano, so small, the amounts of actual silver are microscopic compared to the colloidal.

Might take out your Hashimoto's in a year's time. (Silver is gentle antibiotic, works over time)

[>>5558](#)

I've done a bit of research on the anti-microbial properties of silver. You are correct that nano is the way to go.

however...

I'd rather repair my immune system than continually need an outside anti-microbial substance.

mycoplasma can be pernicious and multiple angles of attack seem prudent.

no reason both therapies couldn't be done simultaneously

the study I used as sauce above is well worth reading (1)

the strain DSM17838 was isolated from a Peruvian mother's milk. L. Reuterii produce Reuterin a potent antibiotic that targets harmful bacteria and leaves the good stuff behind. I figure that strain is one that has symbiotically evolved with humans and it was able to greatly prolong the life of mice with compromised immune systems in the study so it should help humans too.

>Reuterin inhibits the growth of some harmful Gram-negative and Gram-positive bacteria, along with yeasts, molds, and protozoa.

Attention fellow anons that are actually on the spectrum

I've recently concluded my test regarding consumption of two certain natural herbal supplements. The first being 5-HTP. I've been aware, due to some conversations in places like this, that such a supplement could help with symptoms I experience daily from what appears to be some form of autism. 5-HTP helps significantly with mood swings and my ability to focus. I no longer get frustrated with things I don't already understand or don't quickly understand based off of intuition alone. Naturally, this extends out to other areas, like my levels of patience in social situations, my ability to remain calm and not feel flighty in work situations, and a few other noticeable areas (like driving - which can be pretty aggravating sometimes). This also greatly helps to establish a sleeping pattern. I noticed when my supplements ran out that I was having difficulty maintaining a set sleep schedule (or nearly set). It also seemed to help me focus on tasks which were more involved but less of a preference of mine (mostly work situations or social situations, which I suppose if I'm working those two things occur simultaneously). I think I went a bit wordy in this explanation so I'll try to keep the next one short. Please keep in mind that these are only the helpful effects that I've noticed, as I was only ever looking for how it might relate my to my symptoms of autism. For the record, I've never been diagnosed.

Ashwaganda is an adaptogenic herb. It helps greatly with stress levels. It's also quite euphoric on an empty stomach. This stuff is great. I could guarantee you wouldn't need any of those crazy pills doctors give you to deal with stress or anxiety (SSRIs - which you shouldn't take. research something called Akathesia Induced Impulsivity. please don't take my word on this) after you try these things once or twice. In addition to helping with stress, Ashwaganda is said to help maintain a healthy weight by helping with your metabolism, reduce blood sugar levels and cortisol levels (obvious), it supposedly has anti-cancer properties, helps with depression, testosterone levels (male fertility), building muscle mass and gaining strength, brain function - namely memory, inflammation and it's even said to lower Cholesterol and Triglycerides.

Please have a look in to these things to help with your day to day life. These two together have helped me feel so free and calm. It's much easier to appreciate things like normies and the beauty of the world around us. Again, the two of them are called Ashwaganda and 5-HTP.

If you believe you experience any symptoms of autism with any regularity, give these a try and you will likely feel significantly better and more able to fit in with normies.

I posted this in <https://8ch.net/qresearch/res/7240703.html> and was asked to post elsewhere.

Searching for the gut microbial contributing factors to social behavior in rodent models

Running title: Gut microbiota and social behavior

Brittany D. Needham1

, Weiyi Tang1

, Wei-Li Wu1*

Abstract

Social impairment is one of the major symptoms in multiple psychiatric disorders, including autism spectrum disorder (ASD). Accumulated studies indicate a crucial role for the gut microbiota in social development, but these mechanisms remain unclear. This review focuses on two strategies adopted to elucidate the complicated relationship between gut bacteria and host social behavior.

[>>5609](#)

Okay, if I've got this right, this is more or less saying that some people's genes vary in such a way that some are more and less receptive to certain neurochemicals that interact with our Oxytocin receptors. It seems VTA plasticity deals with dopamine absorption in related receptors.

This [>>5606](#) appears to note that certain individuals that have issues with Oxytocin receptors may not be as affected by L. reuteri supplementation as others. Such an issue may also affect dopamine absorption in these individuals.

[glyphosate1.png](#)) ([h](#)).([u](#))

Unique comprehensive analysis

The unique aspect of the new study is that a more comprehensive analysis than ever before was carried out to see if the gut microbiome changes could affect the rat's health.

The researchers applied two levels of analysis to investigate the changes.

- 1) a metagenomics analysis, which looked at the totality of DNA in the gut and thus identified all organisms present
- 2) a metabolomics analysis, which looked at alterations in biochemistry of the gut microbiome environment

Dr Antoniou commented:

"We are the first to use this combination of profiling by metagenomics and metabolomics to look for effects of glyphosate herbicides on the gut microbiome. Through this comprehensive multi-omics analysis, we obtained definitive results demonstrating glyphosate and Roundup impact on both the bacterial population and biochemistry of the gut microbiome."

The metagenomics analysis found that both Roundup and glyphosate affected the microbiome at all dose levels, causing shifts in bacterial populations. Metabolomics revealed that the levels of two substances, phenolic acid and 3-hydroxyphenylacetic acid, were dramatically increased at the two higher doses in the gut of the rats fed both glyphosate and Roundup. These two acids were undetectable in the gut of control animals. This is a clear indication that the LPS/PS enzymes of the phenylate acid pathway was inhibited by the glyphosate and Roundup, since if it were active, it would rapidly convert the phenolic acid to the next substance in the pathway – but that didn't happen.

READ MORE: Fifteen Health Problems Linked to Monsanto's Roundup

Dr Antoniou said that the effect had been previously hypothesised but not proven:

"Our study provides the first proof that glyphosate and Roundup at these regulatory permitted and thus presumed safe doses inhibit the phenolic acid pathway in gut bacteria."

Oxidative stress

The researchers also saw other changes in the gut microbiome that were indicative of oxidative stress, a type of imbalance that can lead to mutations in DNA, damage to cells and tissues, and diseases such as cancer. Gut bacteria respond to oxidative stress by producing certain substances that control it [2].

Biomarkers of glyphosate exposure

Dr Antoniou said that the study has broken new ground in identifying the first ever biomarkers of glyphosate exposure, which could be relevant to humans:

"Our findings suggest that surveys of human populations should be undertaken as a matter of urgency to check if there is a correlation between levels of glyphosate and metabolites. If such a correlation is found, then metabolite levels could be used as a measure of the biological effects of glyphosate exposure."

File (hide): [3982d2fa5ab3583...png](#)
(64.02 KB, 739x899, 739:899,
[glyphosate2.png](#)) (h) (u)

This means it is possible to see if a certain disease in a person is associated with glyphosate exposure by looking at their faecal microbiome, though a causative link between the disease and glyphosate could not be drawn.

Furthermore, the results showed distinct changes in the profile of gut bacterial populations. Glyphosate and MON-52275 increased the levels of *Escherichia coli* spp. and *Haemophilus* spp. while MON-52275 also increased the levels of *Shigella* conjugates. These shifts in bacterial species, if confirmed by further studies, could also act as additional biomarkers of glyphosate and Roundup exposure.

Dr Antoniou said:

"We saw defensive and consistent changes at all doses of MON-52275 and glyphosate. So even at the AEC (Occupational Daily Intake, the level regulators believe can be ingested on a safe basis) over the long term with no adverse effects, but we saw these changes in bacterial populations. In the long term there may be health implications. Currently, science does not understand enough about what the biological and health consequences of these changes might be, but the alterations are in themselves a cause for concern."

Liver damage in rats fed Roundup and glyphosate

The study also revealed that Roundup, and to a lesser extent glyphosate, damaged the liver and kidneys of the rats, even over the relatively short study period of 90 days. (Histopathological (microscopic) examination of the liver showed that the two higher doses of Roundup caused a statistically significant and dose-dependent increase in lesions, fatty liver disease (changes, and necrosis (death of tissue)).

In the new study, in the glyphosate treatment group, there was also an increase in the incidence of this liver damage but it was not at a statistically significant level. In contrast, none of the controls seemed to show the same liver effects, so the changes in the glyphosate-fed animals may be biologically significant. As the authors state, it's possible that they don't reach statistical significance because the numbers of animals were too low and the exposure duration too short. Another month or two added to the study duration could have resulted in statistical significance for the glyphosate as well as the Roundup effects.

The fatty liver disease findings confirm and extend the observations of an earlier study from Dr Antoniou's team. In this previous study, rats were given a dose of Roundup that was a staggering 125,000 times lower, based on the dose of glyphosate, than the lowest dose group in the new investigation. However, they were fed this dose over a longer-term period of two years. This lower dose also caused fatty liver disease.

"We now know that a lower dose of Roundup over a longer time or a higher dose over a shorter time produce the same outcome," said Dr Antoniou.

Kidney dysfunction

There were clear increases in kidney dysfunction – lesions, mineralisation and necrosis – in the Roundup and glyphosate groups, but they were mostly not statistically significant. This again may be because there were too few animals or the study was too short. Anyone wishing to replicate these effects in other studies should extend the length of the study and use larger numbers of animals to see if serious harm to the kidneys occurs over the long term.

reposted from >>>/qresearch/7504899

Glyphosate and Roundup Proven to Disrupt Gut Microbiome by Inhibiting Shikimate Pathway

Fatty liver disease and death of liver tissue were also confirmed in rats fed regulatory permitted and thus presumed safe doses of the weedkiller

The primary mechanism of how glyphosate herbicides kill plants is by inhibiting an enzyme called EPSPS, which is part of a biochemical pathway known as the shikimate pathway. The shikimate pathway is responsible for the synthesis of certain aromatic amino acids that are vital for the production of proteins, the building blocks of life. Thus when the synthesis of the aromatic amino acids is blocked by glyphosate inhibition of EPSPS, the plant dies.

Humans and animals do not have the shikimate pathway, so industry and regulators have claimed that glyphosate is nontoxic to humans.[1] However, some strains of gut bacteria do have the shikimate pathway, leading to much debate about whether Roundup and glyphosate could affect the gut microbiome (bacterial populations). Imbalances in gut bacteria have been found to be linked with many diseases, including cancer, type 2 diabetes, obesity, and depression.

As many species of gut bacteria do have the shikimate pathway, scientists have hypothesised that glyphosate herbicides could inhibit the EPSPS enzyme of the shikimate pathway in these organisms, leading to imbalance in the microbiome, with potentially negative health consequences. Some

have proposed that if glyphosate herbicides do disrupt the gut microbiome, EPSPS inhibition will be the primary mechanism through which this occurs.

However, proof that glyphosate herbicides can inhibit the EPSPS enzyme and the shikimate pathway in gut bacteria has been lacking. But a new study has proven beyond doubt that this does indeed happen.

The study in rats by an international team of scientists based in London, France, Italy, and the Netherlands, led by Dr Michael Antoniou of King's College London and posted on the pre-peer-review site BioRxiv, has found that Roundup herbicide and its active ingredient glyphosate cause a dramatic increase in the levels of two substances, shikimic acid and 3-dehydroshikimic acid, in the gut, which are a direct indication that the EPSPS enzyme of the shikimic acid pathway has been severely inhibited.

In addition, the researchers found that both Roundup and glyphosate affected the microbiome at all dose levels tested, causing shifts in bacterial populations.

Levels tested were previously assumed to have no adverse effect

For the study, female rats (12 per group) were fed a daily dose of either glyphosate or a Roundup formulation approved in Europe, called MON 52276. Glyphosate and Roundup were administered via drinking water to give a glyphosate daily intake of 0.5 mg, 50 mg and 175 mg/kg body weight per day (mg/kg bw/day), which respectively represent the EU acceptable daily intake (ADI), the EU no-observed adverse effect level (NOAEL), and the US NOAEL.

The study found certain adverse effects at all doses tested, disproving regulators' assumptions that these levels have no adverse effect.

Some previous studies have also reported changes in the gut microbiome of laboratory animals exposed to glyphosate and/or Roundup. However, as they did not use the more in-depth molecular profiling techniques (multi-omics) used in the latest investigation, they failed to observe the inhibition of the shikimate pathway.

Quick rundown.

Diseases are caused by toxins who accumulate from our toxic environment. Our body cleans and removes that using lymphatic system and fat.

Fat is really important nutrient. It lubricates joints and vitamin production.

Cholesterol is good too, we use it to make necessary hormones and vitamin D.

YouTube embed. Click thumbnail to play.[\[pop\]](#)The best food is raw food which have not changed its structure by heating it.

Parasites can only be found in unhealthy animals.

We should not be afraid of bacteria, they help us digest our food and heal by eating dead flesh that we do not need.

We all should eat a lot more raw fat, raw butter, raw honey, and raw milk.

These things are truly a health foods.

TINNITUS/RINGING OF THE EARS

1/2

Wanted to share a treatment I've discovered for tinnitus. Unfortunately it does not seem to be a cure (yet).

Long story short, I was diagnosed with gallstones and advised to have my gallbladder removed. Instead I started researching and decided to try magnesium supplements. I've been taking near daily Epsom salt baths and taking daily supplements of magnesium chloride liquid (ReMag) and more recently Magnesium L-Threonate.

I noticed that after 3 days of soaking in Epsom salt baths (4 cups per bath) my tinnitus went away. If I stopped the baths for more than two days the tinnitus comes back over the next day or two. Once I resume the baths it goes away again and stays away until I skip it for a few days.

The magnesium chloride and Mg L-Threonate supplements do not seem to have an effect on the tinnitus (so far).

I've been doing this since 3/1/19 and intend to continue for at least two years. My research and incredible results from Mg supplementation indicates I was significantly deficient and complete re-mineralization can take 2-3 years.

I'd be interested in hearing other anons experience with effects of daily epsom salt baths on tinnitus relief.

I cannot determine exactly how or specifically which part of my body's exposure to epsom salt baths is responsible for the relief I experience. I'd like to try using magnesium oil topically to see if I can get the same effect without the daily baths. However magnesium oil can cause a rather intense burning sensation on some areas. I suspect it's an area on my neck or skull that relieves the tinnitus but any ideas on where might be best would be appreciated.

MAGNESIUM SUPPLEMENTS

2/2

I mentioned my incredible results from Mg supplements. I initially started Mg supplements to try and save my gallbladder and year later I still have it and my symptoms have all but disappeared.

Others symptoms, some since childhood that have shown dramatic improvement include asthma, bruxism, white and colored flashes of light in my eyes, allergy response seems milder, heart palpitations/arrhythmia, muscle spasms, muscle cramps, muscle twitches and a small patch of shingles that crops up annually still appears but it no longer hurts or itches and completely clears up in just a few days instead of 2-3 weeks. Now it more resembles a localized patch of dry skin for a few days.

In addition my sleep is hugely improved, I'm calmer, more relaxed, less angry/stressed, happier and my mind seems less cluttered.

Overall I feel fucking amazing...probably ten years younger. I never expected that at 53 years of age.

Some symptoms definitely got worse before they got better. According to my reading this is common. Taking a warm epsom salt bath provided near immediate relief of the increased symptoms. These included heart palpitations/arrhythmia, asthma and gallbladder symptoms. On two occasions during the first 5-6 weeks of taking ReMag I almost went to the ER due to my heart doing flip-flops. I also experienced such intense contractions of my gallbladder that you could actually see it moving externally by watching the skin during an episode.

I experienced an odd sort of pins and needles sensation in both lungs for a number of weeks and immediately afterward my breathing would be improved and stay that way. My use of an albuterol inhaler dropped dramatically.

All of these improvements and others not mentioned are reason enough to continue with taking the ReMag and Mg L-Threonate. I hoping that once I've achieved full re-mineralization my tinnitus will be cured and hopefully be a bellwether indicating my Mg levels are dropping.

Further research indicated that taking borax would improve Mg absorption so I started that in December 2019. Since then my asthma has improved much further. I can go days now without the inhaler because a simple cough allows me to clear my lungs. Previously, no amount of coughing would help. My asthma started after I dry walled a house infested with black mold. It was bare studs when I started the job and I was told there had been a fire so I assumed it was soot/charring.

I should add that I've been taking daily Apple Cider Vinegar mixed with local raw honey for ten years. I had hoped it would improve my allergies but instead found that I no longer catch colds or flu. That alone is worth it!

I hope this helps other anons get some relief but please do your own research to decide what is best for you.

Making MMS at home

Chlorine Dioxide (MMS) is used throughout the world for water purification and as an internal oxidizer for many health conditions.

It is commonly prescribed for internal use by the drop count of a certain potency (referred to as MMS) per water intake.

Below is one of the easiest ways of making the standard solution for such medicinal uses.

The commonly available kit for making MMS includes 28% sodium hypochlorite and either 4% HCL or 100% citric acid.

The two parts may be mixed and added to water in very small, equal quantities for water purification, but for use internal use, the two are mixed and **only the gas produced** is used - being instead captured into another solution (distilled water). This latter solution is what is then commonly referred to as MMS.

There have been many ways presented for capturing the **gas off** of the two part mix in the solution (MMS), but the following seems to be the easiest by far.

Fill a 500 ml resealable jar half full of distilled water.

Place 5ml of each of the two parts (28% Sodium Chlorite and 4% HCL or 100% citric acid) into a tall shot glass and swirl them together.

Place the shot glass into the water and close the jar.

Wait about two hours for the mixed solution to 'gas off' into the distilled water, then discard the shot glass contents (the two parts).

The jar now contains your Chlorine Dioxide Solution, or MMS, in the potency commonly prescribed by drop count per water intake for internal use.

It will maintain potency in the fridge for a couple of months.

As a side note, MMS is not bleach. Bleach is sodium hypochlorite.

[>>6018](#)

> *correction

4% HCL (hydrochloric acid) is the most common 'part B,' but when citric acid is used instead, it comes in %50 strength.

[>>6018](#)

>Place the shot glass into the water and close the jar.

making sure you do NOT allow contents of shot glass to mix with the distilled water!

I think the much simpler method is the tried and true bubble method

allow the gas produced by mixing the Sodium Chlorite and HCL to bubble thru distilled water

Gout is a very painful experience I was fortunate enough to experience. I could not wear any kind of foot wear for over a year and a half. Walking more than 10 feet was very difficult. I visited the hospital GOLD ward where people are dealing with severe pain. Where they are very nice you do not want to be in a situation that puts you there.

I have the cure and have proven it on myself and others I have met with great success.

When we move our muscles we excrete uric acid into the blood stream where it is carried off and expelled through the kidneys.. It is a by product of our efforts.

If we do not drink enough fluids especially when exerting ourselves and sweating in the heat our blood can thicken resulting in reduced blood flow. The uric acid builds up and exceeds the limited ability of the kidneys to remove the uric acid. Ingeniously the body stores this acid outside the blood stream as uric acid crystals in out joints. Think thousands of rock like needs in your joints.

The feet swell become reddened and hot to the touch. Pain radiates throughout the joints and toes. It is bad, very bad. You can't stand sheets on your feet!

The medical field has nothing to reverse the gout only products to numb the pain and cause other health problems. After 5 years of serious pain they will perform surgery, opening your foot and gouging the uric crystals out. That is the best they can do... no thank you.

While laid up with gout I had the opportunity to distract myself by looking for an alternative. There are a lot of people selling solutions that don't work and homophobic solutions that don't function as suggested. Other solutions at the time seemed risky.

One solutions that I ran across caught my attention. Dark cherries. I can;t say this is scientific research, but I do like cherries. Dark cherries are supposed to have a chemical that reverses the uric acid chemicals back to uric acid. If it worked that would be like a miracle.

I drank 4 oz of dark cherry concentrate (not juice) or ate cherries.8 cherries a day. At first I only noticed small changes like swelling going down, less heat in the joints and reduced redness. Minor changes but it gave me hope.

I dug deeper and learned about the acid and crystals, blood flow and how the kidneys functioned. I also learned that sweets like sugar on the outside is an acid on the bloodstream. And an acid on the outside does the opposite changing your PH, Baking soda is an acid on the outside; to help my kidneys I took a pinch of it in a pitcher of water everyday. I could see and feel progress after about a month not much but progress.

In about 4 months I was walking short distances and under less pain. At a year and a half I could walk long distances with limited pain. At 2 years I could walk, run do what ever I liked.

My gout was very bad. Those that I have helped were under medical care for their gout and wearing Velco casts to ease the pain and allow them to hobble with crutches. All of them reported within 6 months they were normal once again. I had over a dozen people I have recommended this to; it worked every time. I had a few that did not appreciate advice from a non-practicing doctor. Their gout sadly persisted. That was their choice, I do not push what I know on others.

My experience was around 2008. Since then I have not experienced gout beyond a few minor aches. I immediately ate some frozen cherries and the next day no pain.

Prior to the gout experience a few of us in the area caught a flu?? in the spring which seemed to suppress our thirst. It was warm and I was pushing a manual labor project (woodworking) that needed to be done. Exercising, sweating and not drinking is bad. My foot started to ache, but I assumed I had hurt it somehow. A few days later the other foot started to ache. A week later I was hobbling but still pushing on the project... it had to get done. A few weeks later I was crippled with gout.

My wife had a very mild case of gout that lasted a month. Later I found two other people in the area that had experienced the same sickness and lack of desire to drink. They also had gout, but for a very short period.

On my research and health

I tried reporting this issue to the government (CDC) about the gout and a prior illness resulting in a lack of thirst sensation, but they did not care (sigh).

This was one of many health events through my families life that pushed me to learn a lot more about how the body works and to start collecting books on medicine, chemistry, bio chemistry, pharmacology and on and on.

The medical field kept failing us when we needed them the most. Processed foods were making members of my family very ill and at the time no one really understood the impact of MSG, Starting in the 70s it took years to identify it as the cause of health issues and even more time to find the ways it is hidden in processed foods.

The synthetic version of MSG is cheaper to produce and it is a real problem for many people. We have met many people suffering from this problem and many that did not realize the source of their troubles. Our family has cooked from scratch to avoid processed foods for years now. It is a challenge. Over the years we have created hundreds of recipes and techniques to make the processes easier. More importantly, my family is no longer affected by MSG.

Modern books glaze over where the science began in some areas. So I invested in books including some over 100 years old to learn how fields of medicine started. I have read untold research papers in the medical fields along with juried medical journals. And I have found amazing WEB sites where you can dig deep into real science using the same software tools and databases as those doing medical research.

Many share findings hoping others can add to the topic. To understand those sites and how to use them required more books and more research.

At times, I do find solutions that have origins in homeopathic medicine, but when you realize all modern pharmaceuticals have origins in plants and minerals once found in home treatments you realize it is a valid source. You simply have to comb through it and test solutions to determine whether they work or not and why.

Colloidal Silver (CS) is a great example of bad medicine and egregious marketing campaigns. CS was approved by the FDA in 1924. However it was readily available, commonly used by doctors, but could not be patented. No patent, no control over profits. Until antibiotics emerged and was heavily promoted through marketing touting the dangers of CS.

For over 100 years the AMA has pushed medical advances for profit. Including creating illnesses like restless leg syndrome to support the sales of patented products with no demand, but plenty of side effects.

Your future health is based on DNA, environment and what you do to support your current and future health. You can live a long and more importantly healthy life; if you put the effort in now.

Don't rely on doctors. If they tell you wrong you lose your life, they only lose a patient. Don't listen to anyone without understanding what they are talking about and that includes me. Look for insight into your issue and dig deep, talk to others that have had the same problem, maybe they have a safe solution. In some cases you may have to take a risk, make sure you understand the risk.

It is your body you are the one that has the most to gain or lose. Shouldn't you invest time to learn how your body works, what it needs and does not need. There are a lot of good people making recommendations and a lot of charlatans including medical doctors. You are your best guardian.

What we have learned is that no one does more research than when they or a loved one are in poor health. It is what has driven us and we are better for it. Some people simply accept what they are told and go on with suffering or dying.

The wife of one man I know was dying of cancer and knowing me they asked for help. I am not an expert on cancer and have yet to do enough research to truly understand it. However, beyond their deep sadness there was something that did not seem right. I had asked for her White blood count and a few other pieces of information that indicated possible cancer. I asked her to get better clarification on the type of cancer and what stage she was at this time..

I cured this woman, not because of anything I did, but because the doctor when clarifying mentioned at her age there was a risk for cancer and they should watch. There was no cancer present or any indication it would present itself. There was no need for the proposed treatments or the medications she was put on.

Know maybe you know a little more about me and how I ended up with more medical books, vials, microscopes, slides and test equipment than any sane person should admit to owning.

May your research be deep and your health vibrant

Rusty This is supposed to be a board about health. I am posting legitimate information that is invaluable to people with poor health.

You in your infinite wisdom are choosing to ban someone that is trying to help others because you are too stupid to understand I am here to help. You are a Fing idiot and should not be in charge of any board let alone one so critically important.

You can ban me, it will not hurt me. But ask your stupid self how many people are you hurting because you are so unbelievable stupid. Shove your last warning up your ass you idiot.

I won't be back not because my information is not valid, but because you are a idiot. In the future when your guest ask for more real cures it will be your fault because you were so rude. It will be your fault people are sick without reason.

That is a real honor to hold. You, YOU withheld cures from the nation, the world because you failed to realize they are real cures that can make a huge difference. You need a T-shirt that says I ban great cures because I am stupid!

Ban me Ban me O great and wise wizard! Let your stupidity show for all to see. Rusty is not his name, but the state of his mind. Asshole!

For the production I'll refer you to the forum I've gotten most this information from: <https://www.cgcsforum.org/index.php?topic=1139.0>

If you have your own generator and want to convert your Ionic Silver into Collodial Silver, add ~20 drops of [1 tablespoon washing soda in 3oz water] mixture (though I would recommend adding this before production start, some generators assume just distilled water is being used.), and ~5 drops of [50/50 glucose source / water].

Optional addition, for internal use:

>To make and use premixed gelatin:

>Start with 8 ounces of 20 ppm colloidal silver.

>Add 1 gram of Knox unflavored gelatin.

>Heat to dissolve the gelatin.

>Allow to cool.

>Refrigerate.

>To use, shake well, then add 1 tablespoon for each 8 ounces of colloidal silver. The colloidal silver must be hot, above the melting temperature of gelatin.

>Store gelatin mixture in refrigerator.

><https://www.cgcsforum.org/index.php?topic=3911.15>

Bake for ~30mins @ ~175F, or until color change.

Here are the clarifications regarding the states of silver:

Ionic Silver, or Silver Hydrosol, is silver dissolved into water with electrolysis.

It's what you get when you have pure water, pure silver, washing soda and Electricity.

(If washing soda isn't included there are complications with the oxygen produced in the electrolysis process, forming silver oxide.)

It's clear. If there's any color change the ions are starting to clump together, [agglomeration] and it'll turn yellow. Note that this yellow is opaque. The particles of silver are getting bigger thus they start absorbing light.

Now's a good time to let you know, the smaller we can make the particles, the better.

Collodial Silver, is Ionic silver that has been reduced [Ag^+ to Ag]. It turns the dissolved-in-water silver into forever-suspended-in-water silver.

Its colour ranges from light yellow to deep red, but it's 'shiny'. The now-floating particles of silver are bending/wobbling the light as it passes through. They haven't increased in size, the reduction process actually makes the particles smaller, hence their new ability to wobble light as it passes through.

This is called 'surface plasmon resonance'.

The benefits of Ionic silver are topical oriented.

The benefits of Collodial silver are internal oriented, especially if encapsulated with gelatin. Gelatin will protect the particles from stomach acids and it'll be dissolved off in your small intestine. It's a delivery optimization.

Here's an interesting fact: Once your solution starts changing color during the reduction process, you've confirmed you're dealing with particles in the nanometer range of size. Sure, there's a bellcurve of sizes in any given solution, yet know well what you're producing on your kitchen counter between the spice rack and your bowl of cereal, is effectively laboratory grade. Effective as in, for the vast majority (95%+) of microbes/infections you'll be using this on/for, there's no discernable difference between "The nanoest of nanoest super hyper quantum silver" and your slightly stained good 'ol Mason jar.

Let that sink in.

Really, take a moment.

Let me know if this elucidates Collodial Silver enough for You to feel confident.

► Anonymous 02/01/20 (Sat) 19:11:33 ea20a2 [No.6038>>6039 >>6040](#)

[>>6034](#) Rust, Rusty, rusty I guess you really thought you could ban me. This really should not be a war. I am actually doing what you asked at the top of your WEB page.

"Here you will find a collection of information about natural cures and remedies. A repository of information and methods about healing without using big pharma's products.

For too long the medical pharmacology industrial complex has made more money from customers than cures. Many effective natural medicines have been suppressed or banned and forgotten by the general public. You'll find some information, some research links, some opinion. Which old natural medicines have research to back up the claims of cures?"

Aren't you banning/suppressing my research. Real cures with years of invested time on my part. You are doing what Big Pharma does except you do it because you do not realize the value of what I am offering.

Your Board had little traffic and little valid information with some that was inaccurate and dangerous advice with terrible sources baking the wrong information.

When someone comes along and provides not one but multiple real solutions you BAN them. You are doing the one thing you are fighting against.

My suggesting you are stupid may have been mean, but you are not adapting and investigating what is before you.

You want sources yet the internet is rife with invalid sources including those fostered by big pharma and the food industry. Whose source are you going to believe and how much research are you going to do to verify the correct research. It appears you don't.

The Pope banned Galileo for daring to state the earth orbits around the sun as you have banned me. It took over 100 years to prove Galileo was right. Some thought Eisenstein wrong only years later to be proven right.

I do not place myself among the greats, but do we need to wait 100 years before my real cures are taken seriously. So that we (both) can help those in need. If the AMA and big pharma have let you down along with the food industry who are you going to trust?

Can you for a moment imagine a drug store without a cold remedy center? It is true D3 and Zinc, one dose works, kills colds in 6 hours. It is fact all of the symptoms of a cold are your body fighting the foreign object that has never left your nose. The cold virus cannot survive above about 93F. Look it up.

If I am telling the truth, and I am, people in extreme pain can walk again without pain. Isn't that something you could be proud of; hosing a board that cures people where no other solution is possible?

I have proof my solutions work, without question. My research is grounded in test with humans, willing volunteers looking for a way out of their suffering.

Much of my best work defies common medical practices, but it works and works well compared to their offerings that only mask symptoms.

Remember margarine is good for you butter is bad, Crisco (hydrogenated fat) is good for you lard is bad, "Real" research with real sources to back them up. Just like fluoride has numerous articles backing how good it is for you.

If you don't want me posting any more on your board fine. Your saying I can't prove my research has no grounds since you have not been privy to my research or live tests.

Controlling the conversation is something we should not see on Anon boards with all the censoring we see in YouTube, Facebook, Twitter and the MSM. Be better than them. WWG1WGA, I am working for all of us.

YouTube embed. Click thumbnail to play. [\[pop\]](#) as posted >>>/qresearch/8445888

4 days ago: Dr. Mohammad Sajadi, an associate professor of medicine at the University of Maryland, thinks weather might play a role. He and colleagues found a striking temperature similarity among regions with sustained outbreaks of COVID-19: between 5 and 11 degrees Celsius (41 and 52 degrees Fahrenheit).

YOU get a hot shower.

.... and YOU get a hot shower.

EVERYBODY gets a hot shower.

AND, there is also this new virus killing technique coming out of South Korea.

It is working so well, it may work on many viruses. AND it is working so well they are now doing dose studies to prep for fast clinical trials.

Invitro is finished.

In vivo animal studies next (short duration, proolly mice)

In vivo can also be done on humans quickly, as the ionopore medication they are using is a prescription malaria medication off of patent.

Green tea if bitter over steeped is a zinc ionopore also. You need to steep out the EGCG's that give the tea a bitter taste. Eat the leaves if you are using bags and you have the virus. Loose leaf is stronger.

Not normal, but, what about this timeline is normal?

Doc has to be at hospital, is doing the green tea and zinc thing below to ward off the virus at work that he WILL be running into.

Zinc + an "ionopore" both taken simultaneously appear to be killing the virus in South Korea within 48 hours, in the oldest and worst patients, even after severe infection.

Advise all first responders to get out the vitamin pills, with Zinc, any amount will do as long as you are not deficient in Zinc. Then add green tea for the EGCG ionopore effect.

What is an ionopore?

How do you take it?

Ionopore:

Zinc = ion

Pore = opening

The "ionopore" is a molecule capable of opening the human cell walls to let the zinc in to kill the virus

(vid related after 1;50)

Normally, the cells do NOT let Zn^{++} into the cell unless CAREFULLY controlled, cuz it messes up the RNA replication system.

Which is the point.

Mess up the RNA replication of the virus. And the Zinc ionopore combo works quick it appears.

The particular ionopore they are using in South Korea is an old malaria medication that is now out of patent, has a few well known side effects, but well tolerated, used by millions for many years. It is called chloroquine.

South Korea does not have chloroquine, they are using Hydroxychloroquine, which turns out maybe better, cuz stops cytokine storm in the lungs also?

It is by prescription.

BUT

The EGCG in GREEN TEA is also a zinc ionopore, so you can drink some bitter over steeped green tea when you take the zinc, and if taken together, the egcg lets the zinc in the cell almost as well as chloroquine. (See the med research charts in the vid)

Charts, sauce, all medical reports getting ready for these clinical trials are in the 17 minute vid, #3, embedded here, starting just 1;50 ish.

I'm including all three videos done by this doc because they are excellent at explaining and saucing this information, even for medical community at large.

But vid #3 covers the zinc green tea and zinc quercetin combo's

Russian doctor offers a new approach to treatment of corona-virus

<https://yandex.ru/turbo?text=http%3A%2F%2Fsibkrai.ru%2Fnews%2F7%2F933759%2F>

Google translated from Russian:

Novosibirsk scientists know how to make coronavirus safe

April 2, 2020

Specialists at the Center for the Prevention of Thrombosis found a way to turn deadly COVID-19 into regular flu. About this discovery Sibkrai.ru was told by the head of the Center, candidate of medical sciences Andrei Gromov.

- Andrei Alexandrovich, do you really know how to cure a coronavirus?

- No, I'm not a virologist and I won't be able to treat this infection. But we look at the problem from a different perspective. We know how to minimize the effects of a viral infection. After all, people die not from the virus, but from its complications. If you manage to avoid them, then the great and terrible COVID-19 will be no more dangerous than ordinary flu and our immunity will be able to cope with it.

“And what is your confidence based on?” You yourself did not deal with patients with coronavirus?

- The fact is that the COVID-19 epidemic has become such a shock for mankind, such a planetary threat, that world science has taken unprecedented measures. Scientists began to exchange information in an emergency. Chinese researchers published detailed protocols on the course of viral infection in major journals. And I, as a specialist who develops technologies for the diagnosis and treatment of thrombosis, saw a weak spot in the therapy used today. The fact is that the whole world treats the virus, that is, the pathogen itself is trying to destroy. And we decided that until the anti-virus remedy was found, we should concentrate our efforts on preventing consequences and complications.

Now in the world against COVID-19, two methods of treatment are used. The first is antiviral drugs, Chinese doctors mainly used ribavirin. The second is powerful anti-inflammatory substances designed to prevent the development of pneumonia. Those that are really effective are heavy anti-malarial drugs, such as Chloroquine, Hydroxychloroquine. A lot has been written about them. But, as experience shows, these drugs are not enough.

“What do you suggest?”

- And we found a weak spot in this infection . As you know, it affects one organ - these are the lungs. There we have the main "battle". Therefore, it was the lungs that we decided to protect - to prevent pathology from developing in them. After all, pneumonia does not begin on the first day. The infection spreads quite slowly. At first it “occupies” the nasopharynx, then gradually “crawls” to the lungs. Therefore, doctors have the opportunity to buy time.

In Russia, the situation is not as serious as it was in China. About 23% of patients have an asymptomatic infection in our country, they have a small viral load, and their immunity copes with the disease on their own. In 63-65% of patients, a viral infection of the type of influenza or parainfluenza develops. And only in 14% everything flows into pneumonia. This is the data of Rospotrebnadzor. Up to a third of patients with complications in the form of pneumonia do not survive. And they die precisely from pneumonia. Moreover, it is disastrous. Even those recovering develop adhesions. That is, the lungs are pulled together by a scar of connective tissue, and a person remains with respiratory failure for life - in fact, becomes an invalid. So, if you stop the development of pneumonia, then the virus can cope with the virus itself.

“But doesn't our medicine know how to treat pneumonia?”

- This is not about ordinary pneumonia. Here is the thing. COVID-19 is a smart virus. Once in the lungs, he is waiting for an immune response. And immunity throws all its defenses there, these are white blood cells, and special proteins, and NK cells, and T-lymphocytes, and macrophages ... They act like artillery shells or grenades. There is an explosive reaction. That is, they destroy the virus, but also damage the surrounding tissue. And lung tissue - it is all riddled with blood vessels. And a side effect of this battle is rapid pulmonary edema. Breathing begins to break. Moreover, the more our defenders “try”, the more they throw out inflammatory proteins, the more their native cells are damaged.

- It turns out, the more actively the body fights, the sooner it loses?

- In fact of the matter! And watch what happens. These "explosives" that immunity cells emit for our protection, they damage the walls of blood vessels. And then blood plasma penetrates into the lungs, into the respiratory vesicles (alveoli). It contains fibrinogen - a large fibrous protein, it is needed in order to close the damage to blood vessels. That is, in principle, fibrinogen protects us from bleeding. But in this case, he begins to work against the body.

Disclaimer: this post and the subject matter and contents thereof - text, media, or otherwise - do not necessarily reflect the views of the 8kun administration.

Part 2 of 2

A cunning virus wraps the situation in its favor and uses fibrinogen for its own protection. He builds around himself a kind of ramparts, walls, trenches, dugouts, so that he can no longer get close to him. But another thing is worse - in the lungs, thus, numerous microthrombi are formed.

- That is, the virus reverses our immunity against ourselves?

- That's it. In fact, he uses our defense system for his own purposes. This is the trick. Not without reason, everyone notes that this is a very smart virus, it specifically causes such a blast wave in the human body - it provokes us. He initially “knows” this mechanism and expects to use it in order to entrench himself, fence himself and protect himself from the body by blood clots.

As a result, blood clots flood the lung, squeeze it from all sides - and as a result, we have all these difficult cases, including deaths. If we can stop the process of thrombosis, the problem will be solved - the virus will lose its lethality.

- But surely this mechanism is known not only to you?

- Of course not. We are not the only ones in the world so smart. But there is one point. I am a specialist in thrombosis. The doctors who are now struggling with COVID-19 have no experience dissolving large blood clots, and I have 30 years of experience. I know how this works, I myself dissolved pulmonary thromboembolism, and these are very heavy blood clots, equal in mortality to a heart attack. And I understand what can be done in case of coronavirus pneumonia.

- So what?

- Here I will not open America. There are well-known remedies. Firstly, these are anticoagulants - they interfere with blood coagulation, for example, heparins. And secondly, thrombolytics - they dissolve blood clots. (By the way, I note in parentheses: low molecular weight heparins are produced in Milan. And I do not know why Italian doctors do not use them.)

But the most important thing is the time to start treatment. Now all over the world, patients are being treated when it is too late - pneumonia is in full swing, blood clots have already developed, a person is in serious condition. We suggest doing this much earlier. Since the virus gives us time, we need to start treatment before it comes to pneumonia. Introduce heparins to those who have just had shortness of breath - moderate patients. And, of course, to everyone who is at risk, who are over 60, who have chronic diseases — cardiovascular, diabetes, oncology ... This, you can say, is our Novosibirsk exclusive, our know-how.

But there is another local exclusive. The fact is that the Americans, as far as I know, also had the idea that blood clots could be dissolved. And even the other day they decided to try this idea. But the problem is that their thrombolytic is very expensive and it is not possible to use it massively, only on the most severe patients. And such patients, as we said, are often too late to treat. So, about the exclusive. In Novosibirsk, they produce a drug that is much cheaper, has no side effects and can be massively used for treatment in such situations. This is Trombovazim, it is well known to specialists.

Humanity is not yet able to defeat COVID-19. Until specialized antiviral drugs and a vaccine appear, he will infect us. But what we can and offer to do today is to minimize mortality. Stop the disaster. Save the lives of thousands of people who die from the effects of coronavirus every day. It is quite real. And then the infection will go into the category of habitual respiratory diseases, hospitals will be unloaded, people will perceive COVID-19 as a normal flu, which, of course, is not very pleasant to hurt, but not mortally dangerous.

For reference: Andrey Gromov , Director of the Center for the Prevention of Thrombosis, Ph.D., Senior Researcher at the Laboratory of Clinical Biochemical and Hormonal Studies of Therapeutic Diseases, Research Institute of Therapy and Preventive Medicine, author and co-author of seven textbooks and monographs, as well as more than 250 printed scientific papers, speaker of many international and European medical congresses.

>protect himself from the body by blood clots.

Serrapeptase and Nattokinase, enzymes that destroy dead proteins should take care of that. Blood clots = dead proteins.

If one of the things that this C19 does is rely on dead proteins, this serrapeptase can take care of that.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5372539/>

Nattokinase: An Oral Antithrombotic Agent for the Prevention of Cardiovascular Disease

Nattokinase (NK), a potent blood-clot dissolving protein used for the treatment of cardiovascular diseases, is produced by the bacterium *Bacillus subtilis* during the fermentation of soybeans to produce Natto.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5790697/>

Analytical techniques for serratiopeptidase: A review

Serratiopeptidase (US: serrapeptase) has been used in Europe and Asia for over 30 years, but is relatively new in the United States and Canada [2]. It has powerful anti-inflammatory properties. Clinical studies have shown that it is effective in reducing swelling and edema and metabolizing scar tissues in the body [3], [4] and particularly useful for post-traumatic swelling, fibrocystic breast disease and bronchitis [5], [6], [7], [8]. It can digest dead tissue, blood clots, cysts, and arterial plaques [9].
